

Tonmuy Ahmmed Sifath

Front-End Developer | tonmoysifatmd@gmail.com | +8801757416917

Objective

Dedicated Frontend Developer with a strong passion for crafting exceptional user experiences. Skilled in creating responsive and visually appealing web applications.

Skills

- ★ **CMS:** HubSpot
- ★ **Frameworks:** React.js, Bootstrap
- ★ **Programming Language:** JavaScript and Python
- ★ **Markup and Style Sheet:** HTML and CSS
- ★ **Database:** Firebase Realtime Database
- ★ **Tools:** GitHub, VS Code Editor, PyCharm, CodeBlocks, IntelliJ IDEA
- ★ **Other Technologies:** npm, REST API, Axios, Async and Await

Projects

Webpage Rebuild

I worked for "Social Scene-A Event Management Company". I was hired to migrate their website's homepage from Shopify to HubSpot. The link is given below.

Integrating With HubSpot I: Foundations Practicum

In this project I had to create a Node application that would generate custom object(Sportsman) records via API call.

I had to put three routes in that node app:

- 1) app.get for the homepage ("/").
- 2) app.get for rendering the form in a pug template ("/update-cobj") and
- 3) an app.post for the route ("/update-cobj") that sends along the data captured by the form.
